OBJECTIFS DE DÉVELOPPEMENT DURABLE

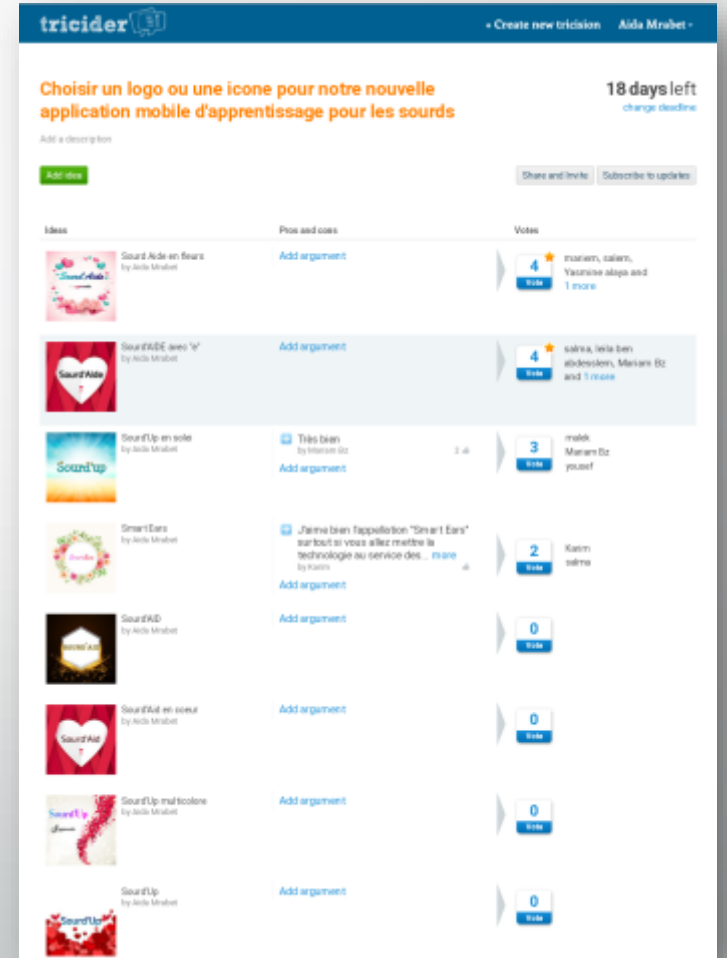

Introduction

Sign language is a language used by **deaf people**. It is practiced by interpreters, by specialized teachers, by parents of deaf children, by a coda. Sign language uses **both hands, facial expression and body movement**.

Tricider

In a purely democratic way, students' votes resulted in choosing three logos that we gladly opted for our applications developed for deaf people. "Tricider" was our companion to do it.

The screenshot shows the Tricider website interface. At the top, there is a blue header with the Tricider logo and a user profile for Aida Mrabet. The main heading is "Choisir un logo ou une icone pour notre nouvelle application mobile d'apprentissage pour les sourds" with a "18 days left" countdown timer. Below the heading, there are buttons for "Add ideas", "Share and invite", and "Subscribe to updates". The main content area is a table with three columns: "Ideas", "Proposed ideas", and "Votes".

Ideas	Proposed ideas	Votes
	Add argument	4 votes marwan, salim, Yasmine alqas and 1 more
	Add argument	4 votes salma, hiba ben abdenekter, Marwan Dz and 1 more
	<input checked="" type="checkbox"/> Très bien Add argument	3 votes moh, Marwan Dz, youcef
	<input checked="" type="checkbox"/> J'aime bien l'appellation "Smart Ears" surtout si vous allez mettre la technologie au service des... Add argument	2 votes Kaim, salma
	Add argument	0 votes
	Add argument	0 votes
	Add argument	0 votes
	Add argument	0 votes

Our goal

It's an application to learn signs in Arabic language. It presents several tasks for the benefit of deaf people and / or their companions such as: calculation (addition, multiplication ...); the alphabet ; Numbers ; colors ; animals ; days ; time ... Finally and to test your skills; we offer a kind of interactive learning: some exercises in the form of a quiz game.

Our goal

After having visited the association of hearing impaired, which remains anonymous in Moknine, we created this application in order to present it to the general public and to support it morally or materially.

So the application is only a mean to appeal to donations and solidarity especially that we were really amazed by the beauty of the products of these disabled people that we discovered their creative spirit which lacks nothing nor intelligence nor skill. In fact, we bought a few items from the association during our visit to encourage them further and ensure a sense of solidarity.

The application is also a kind of advertisement for this association. To do this, we used the multiple choice questionnaire: the questions are always used to present the association. As 'look for the date of foundation; find the number of its members etc.. Our application, after all, is a call to celebrate solidarity between people.

Our goal

The purpose of this application is:

*facilitate communication between normal people and others who are disabled, especially the deaf and dumb. So a deaf or dumb man can

*request a service from the other without any problem and without resorting to gestures; so just click on an icon that indicates a specific gender task: thank you, hello ... These are of course the expressions most used in our daily life (gratitude; recognition; request for help ...) As well verbs (walking; eating; drinking...). That said, any other expression to request any service can be written up there and everyone can hear the request of a deaf-mute.

Our goal

Le sourd peut évidemment voir sans parler donc il suffit donc décrire le mot approprié à son besoin ; un assistant vocal est déclenché et le texte sera converti en vocal !

Creation of forms using the Microsoft Forms tool

We used Microsoft Forms to create surveys, online questionnaires. We chose two teams to do two tasks: Arabic and another English version to find out the vision of society towards these disabled people.
